

Becker Construction, Inc. provides advanced technology features that save you energy and money while providing increased comfort.

Insulated Right

R-38 in the Attic and R-15 in the walls helps keep your home comfortable and quiet. Insulation installed right means there are no gaps, compressions, or misalignments.

Tight Construction

Our homes are sealed with caulks, foams, weatherstripping, gaskets, and door sweeps to reduce drafts and keep out harmful pollutants, pollen and pests.

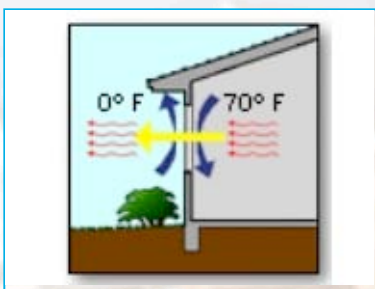

Sized, Sealed, and Insulated Ducts

Properly sized ducts that are tightly sealed can increase your heating and cooling system's efficiency by as much as 20%. A properly installed duct system will be quieter, more comfortable, and save you money.

High Performance Windows

High-performance windows with low-e coatings help keep heat in during the winter and out during the summer. They also block damaging ultraviolet sunlight that can fade carpets, interior finishes and furniture.

ENERGY STAR Label

The ENERGY STAR label on your home means that it meets the EPA's strict guidelines for energy efficiency. Ask us how our ENERGY STAR qualified homes can improve your home owning experience.

ENERGY STAR[®] qualified homes give you more!

BeckerConstructionInc.com

A new home that has earned the ENERGY STAR meets EPA's strict guidelines for energy efficiency. This exemplary performance is verified by an independent third party.
